Thailand Updates

Domestic gas volume suppressed by LNG import; THB fluctuation continues

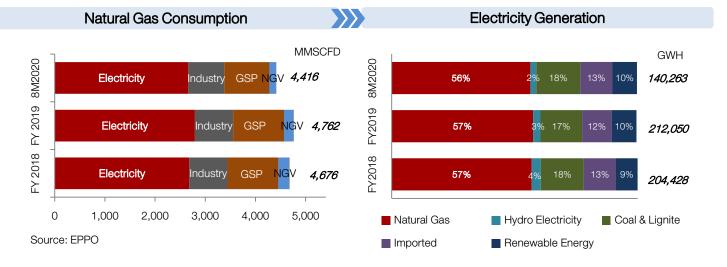

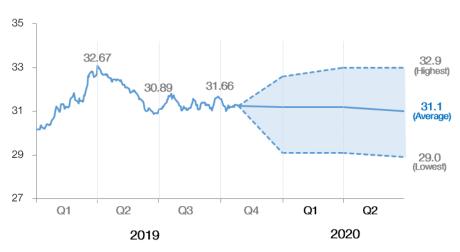

Thailand Energy Overview

- Lower energy demand from COVID-19 outbreak
- More LNG imports from low LNG spot prices
- Slight decline from Myanmar piped gas imports due to natural decline

Exchange Rate Movement (THB/USD)

Consensus on the exchange rate mostly depends on

- o The concern on the second wave of COVID-19 outbreak
- The uncontained COVID situation in US and the Federal Reserve's easing monetary policy guidance weighted down on US
- The rising local political uncertainty including the sudden resignation of the newly appointed Finance Minister in September
- Profit repatriation and dividend payment of foreign companies also supported USD upside
